

## Supply and extract air: FRS-DWK ceiling/wall box with DLV design ventilation valve

Helios design ventilation valves combine discreet styling with functional properties. Thanks to their unobtrusive appearance, they can be integrated into a variety of room concepts in combination with the FRS-DWK.

### Valve connection components

For the use of room-side supply and extract air elements at the duct ends, the Helios flexpipe<sup>plus</sup> range includes aerodynamically optimised ceiling and floor boxes as well as wall ducts. Each is equipped with two parallel duct connections for the airflow rates required in accordance with German DIN 1946-6.

### Installation notes

For the **FRS-DWK 2-75 for round ducts**, the valve connection spigot may be shortened to a **maximum of 130 mm**; for the **FRS-DWK 2-51 for oval ducts**, to a **maximum of 105 mm**. Further shortening is not permitted, otherwise the valve can no longer be installed.
